

Attachment A

Reclamation Narrative

Blue Mountain Crushing, LLC ("BMC") procedures for reclamation on the "BMC Seep's Ridge Road Pit" will be as follows:

1. Prior to operations, BMC will evaluate the top soil depths of the proposed "pit".
2. Strip the existing Top soil from the Operation Area (<10 acres).
3. Once excavation has completed, BMC will re-shape the slopes consistent with the Reclamation Plan.
4. Once slopes are re-shaped, BMC will place the striped top soil back at a depth the was existant prior to stripping
5. BMC, or a 3rd party Sub Contractor will then apply a seeding mix via "hydro seed" that is the same as the mix used on the Seep's Ridge Road Project. BMC will apply this at a time of year that is suitable for hydro seeding.
